

RGB/RGBW

DMX Lite™ Controller

Product Data Sheet

Product Specifications

Input Voltage	Output	Wi-Fi Signal Distance	Size	IP Rating
12-24V Constant Voltage DC	DMX512 and Wi-Fi Signals	40 Feet	4.72" x 2.95" x 1.15" (12 cm x 7.5 cm x 3 cm)	IP20 (Indoor/Dry Location Only)

Dynamic Modes	Zones	Power Save Memory	Ambient Temperature	Power Consumption
10	3	Yes	-20C to 40C (-4F to 104F)	< 20 mA

Product Features

DMX512 Controller

Stylish glass interface

DC input and DMX output screw terminals

Fits in a standard US single gang box

Mounting plate and screws included

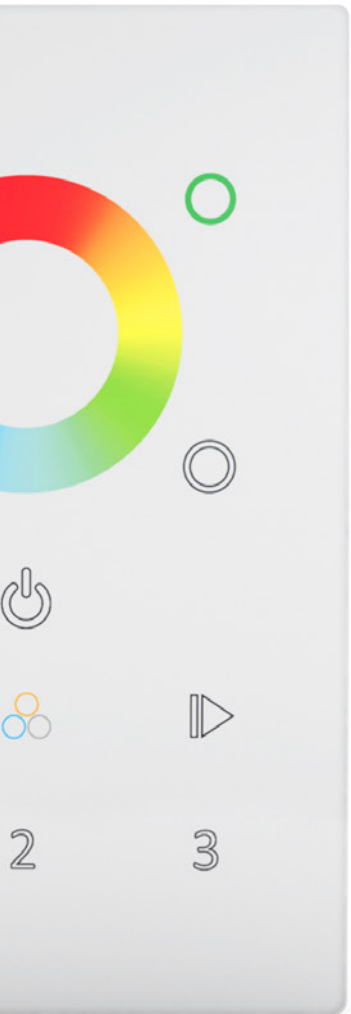

Short circuit protection

3 individual zones of control

Works with both RGB and RGBW fixtures

Emits its own Wi-Fi signal

Live control from both the wall and the phone app

Tools Needed

Flat-Head Screwdriver

Small-Flat Head Screwdriver

Phillips-Head Screwdriver

Wire Strippers

Controller Wiring

1. Ensure that you have a dedicated 12V or 24V constant voltage DC power supply to power the controller itself that is separate from the power supply you will be using for your light fixtures.
2. Connect the power supply using the screw terminals. Power supply positive and negative should be connected to "V+" and "-" terminals under DC Input, respectively.
3. Connect the DMX data cable to the DMX Output screw terminals. Data Negative will be the terminal marked "D-", Data Positive will be the terminal marked "D+", and Ground will be the terminal marked "GND." If you are using CAT5 cable for data wiring, the standard pinout scheme would have Solid Orange as "D-", Striped Orange as "D+", and Solid Brown as "GRD." Please see the diagram below:

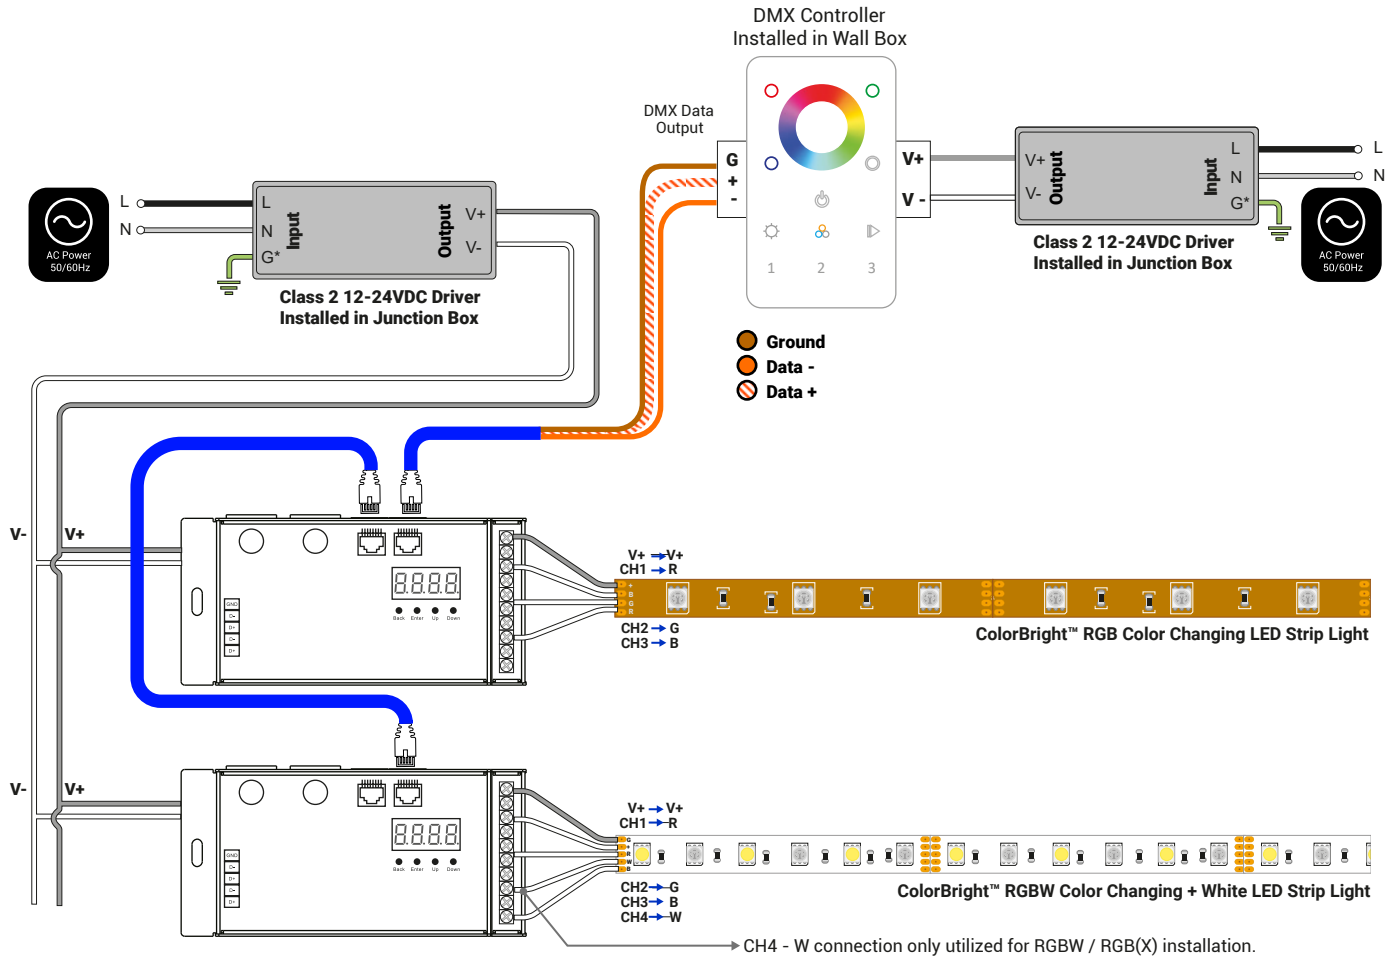

4. Power up the power supply once your installation connections are all completed.

Controller Mounting

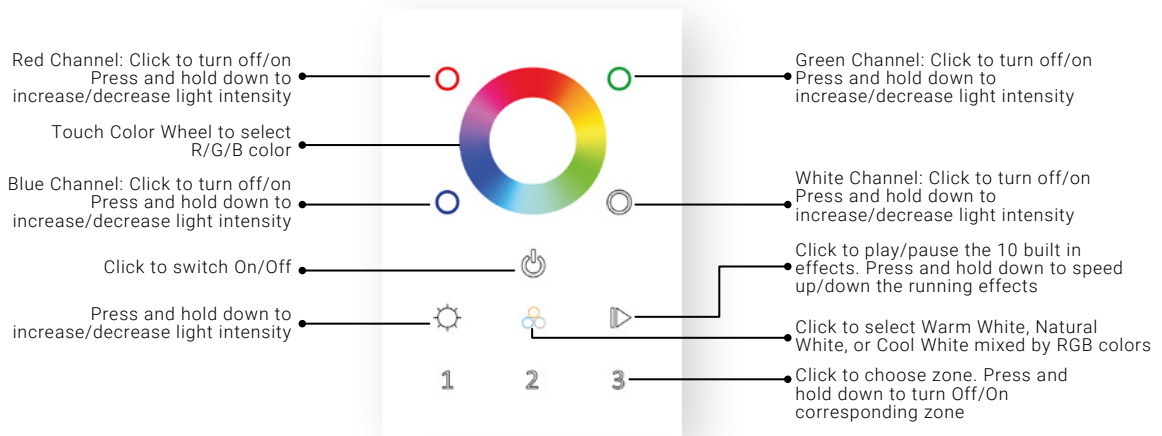

To mount the controller into a single gang box, simply pop the faceplate of the controller off with a flathead screwdriver to expose the screw holes, screw it into a standard switch box with the screws provided, and replace the faceplate when done.

System Wiring

Controller Functionality

The Wi-Fi Reset Switch button on the back of the controller is used to factory reset the Wi-Fi signal on the controller in case the controller isn't initially connecting with the phone app. You will rarely need to use this button, but ensure that you follow the instructions in the phone app section of this guide to set up your network connection before affixing the controller into the wall.

Dynamic Mode Guide

By pressing the button that looks like the Play symbol on the controller, you are able to access Dynamic Mode which consists of ten basic preset scenes loaded onto the controller. Short pressing the button switches/pauses the mode, while long pressing the button adjusts the speed of the current mode. Below is a chart of the scenes available.

Mode	Description
1	Full Color Fade #1
2	Reverse Rainbow Fade
3	Random Full Color Fade
4	7 Color Jump
5	RGB Fade in/Fade Out
6	RGB Fade in to Off
7	RGB On to Fade Out
8	RGB Jump
9	Full Color Fade #2
10	Pastel Color Fade in/Fade Out

Phone App and Wi-Fi Info

The RGB/RGBW DMX Lite™ Controller is capable of being used with a very basic phone app when it is connected to the Wi-Fi signal that the controller emits. Please note that in order to use this function of the controller that you must disconnect from the Wi-Fi your phone is currently using and switch over to the controller's Wi-Fi.

Download the Mobile App:

Search your Google Play or Apple App Store for the app, "EasyColor Pro" and download the application.

Pair Controller to Mobile Device:

1. Go to the Wi-Fi settings of your mobile device
2. Connect to the network labeled "Easy Lighting"
3. Type in the password "0123456789"
4. Open your EasyColor Pro app

Zone Setting

This controller is capable of controlling three separate zones of DMX fixtures. The zones are designated by addressing your fixtures as follows:

- Zone 1:** Address to 001
- Zone 2:** Address to 005
- Zone 3:** Address to 009

While you may only be using a 3-channel product, the controller's zone setup is fixed at a 4-channel default. Channel 001 is Red, Channel 002 is Green, Channel 003 is Blue, and Channel 004 is White (or unused if only using an RGB product).

Once the address is set on the DMX fixture, just press Zone 1, 2, or 3 on the controller to start controlling those fixtures. Multiple fixtures can be set to the same address in order to control multiple fixtures in the same zone.

Troubleshooting

Lights not responding to the controller?

1. Make sure that the blue indicator light is on by pressing the power button. A red indicator light signals that the controller is off, but the blue indicator light will blink when you press down on any key on the controller.
2. Make sure that you have pressed the appropriate zone button before trying to change the color of a fixture. For example, if you know that a luminaire is addressed to Zone 2, press the "2" button prior to attempting a color change.
3. Make sure that the zone has not been turned off. Long pressing one of the number buttons will turn a specific zone on or off. Additionally, long pressing one of the RGBW buttons will adjust the brightness of that color and short pressing one of those RGBW buttons will turn the respective channel on or off.
4. Make sure that the DMX fixture is addressed properly. Remember, the zones will only work when addressed to one of the addresses in the "Zone Setting" section of this datasheet.

Lights responding incorrectly?

1. Make sure that all wiring connections are correct per the wiring instructions mentioned above. Reversing the **Data +** and **Data -** wires can cause lights to flicker and not respond to the controller.
2. **Data -** wires can cause lights to flicker and not respond to the controller.
3. Check the power connections of all components (controller, fixtures, drivers, etc).
4. Check DMX data connections.
5. Check DMX fixture connections.

Warranty Information

Limited Warranty

This product has a 5 year limited warranty from the date of shipment. This warranty only includes the main product outlined in this specification sheet and does not include the additional accessories that are used as a reference. Complete warranty details for fixtures and additional accessories are available at: <https://www.flexfireleds.com/warranties/> within the Policies section. For warranty related questions please contact the product support team at support@flexfireleds.com.

Consumer's Acknowledgment

Flexfire LEDs, Inc. stands behind its products when they are used properly and according to our specifications. When you purchase our products, you are agreeing to the terms and conditions outlined in our warranty section. We try our best to make recommendations, but the burden of proper installation, design, and maintenance relies on the purchaser. This limited warranty does not include product failures that are the result of: Not using a voltage regulated power supply to connect the LED product or controls; Connecting LED products to the wrong output voltage; Improper connection of power supplies, LED products, or controls; Connecting LED products or controls directly to any AC power source if they are stated for DC only input; Connecting power supplies backwards to an AC power source; Products used in an inappropriate location or in environmental conditions (temperature, humidity, moisture, etc.) outside the normal specified range; Water damage to products not specifically sold as waterproof products; Electrical power surges and spikes; Damage from hail, flooding, tornado, fire, wind, earthquake, lightning, electrical storm, or any other natural disasters or "force majeure" incidences; Damage caused by a vehicle or other accident; Damage caused when transporting the item; Damage to any products that were modified by the user, used for purposes other than as intended or directed, or connected to LED systems or components not purchased from Flexfire LEDs; Products that have been subjected to misuse, mishandling, misapplication or accident. Products used in connection with any components, devices or systems other than those explicitly approved as compatible with Company's products and listed on Company's website. Excessive wear and tear and/or physical or accidental abuse, loss, or theft. Improper repairs or warranty services performed by someone other than Flexfire LEDs will void this warranty.
